Abstract

A Project For Collecting Information and Send It to NJUer.

1 Introduction

Now the news sources are very wide, and the update frequency is high, more mixed with a lot of noise interference, may often miss important news, there is no way to get the information you need in time.

—— 1016-1022: Let's Begin

At present, the main contradiction of NJU students' learning has been transformed into the contradiction between the increasing demands of NJU students' self-learning in internal papers and the insufficient and timely acquisition of information.

I believe you have found that the information distribution of various teaching activities in NJU is very scattered and has Jiangsu characteristics. In most cases, we need to obtain the latest information through various channels. How to quickly obtain information, and store, classify, facilitate our personalized screening? Python provides us with a good set of methods.

2 Conclusion

we have designed and deployed a system that provides a solid basis for our students to have a comprehensive understanding of what is happening in our campus.
